Projects Undertaken

A2R SOFTWARE CONSULTING (June-2025 to Present)

Project Title: Pumper Pal
Role Developer

Technologies: - C#, Dotnet Framework, MVC, Web API, SQL Server, Html, CSS, Bootstrap.

Description Pumper pal is the online system where users can upload their locations if the need septic tank cleaning. Users will register to the application and add their locations and raise a service request. We have an admin panel where the admin will assign the location to a particular cleaner. Once the cleaner has been assigned the location the cleaner will reach the location and performs the action. After that, the invoice is generated for the same.

Roles and Responsibilities:

● Interacting with client to analyse business requirement and scope of the project. Analyse user requirements and planned accordingly within time bound.
● Implementing business logics.
● Building **Application Layer** in the project.
● Interacting with other systems through web services (**REST APIs**)
● Support in developing the **DAO layer** with **Entity Framework**.
● Worked on Controller Layer mapping the URL with specific controller method.
● **Tested APIs** with the help of **Postman**.
● Reducing boiler plate codes and analyse the program to identify the codes changes as per the business requirement.
● Worked extensively with SQL Server databases, including writing stored procedures, queries, joins, and performing database operations using EF/EF Core.
